1 Audience

This document is intended for business, technical and EDI personnel engaged in establishing an electronic connection with Hamburg Süd for the purpose of exchanging status messages for container movements via XML format.

The following chapters provide information regarding General Conventions and Message Specifications to receive truck events from the motor carrier. These data will be used for providing track & trace information to Hamburg Süd customers.

2 General Information

2.1 Functional Description

Date / Time information in <SightTimestamp>

In general the date and time given in the tag <SightTimestamp> will be assumed as the time, when the reported event occurred.

In case the <SightCode> tag is set to code “AA” or “AB”, the given date and time will be assumed as estimated, e.g. the appointment date for import or export.

Date / Time format

All Timestamps have to be reported in ISO8601-compliant format. Please report only local time, including the offset to UTC:

"[YYYY]-[MM]-[DD]T[hh]:[mm]:[ss]±[hh]:[mm]"

Example: 2016-05-30T22:45:13+06:00
 Central Standard Time (CST)

2.2 Processing Guidelines

Hamburg Süd is requesting to receive equipment status events in XML format from motor carriers. A single message may contain several events. Please note that only valid XML files will be accepted and processed by Hamburg Süd.

The EDI partner has to ensure that all files are validated against the XSD schema, as invalid files will be disregarded.

EDI communication depends on Trading Partnership and will be mutually defined within a separate agreement. Common protocols for the transmission of messages are e.g. FTP or SFTP.

It's essential that the events are forwarded to Hamburg Süd as soon as they are available. The EDI trading partner can transfer the files to Hamburg Süd in fixed intervals not longer than 15 minutes or as soon as the event is available.

2.3 File name

The file names of the delivered XML files should have the following pattern:

"truck_<motorCarrierID>_DATETIME<YYYY-MM-DD-HH-II-SS>_<Running number>.xml

Example:

- truck_GCPV_2016-05-24_21-45-26_0000001.xml

2.4 File size

The received XML files can contain multiple container events. The XML files should be limited in size by the truck provider to a maximum of 5 MB.

3 XSD Schema Description

The following chapters are defining the XSD schema and the elements with their attributes. Please note that the main schema to be referenced in your XML files needs to be “M_TRUCKEVENT_HSDG.xsd”. That schema has elements that are referenced in further XSD schema files / namespaces.

The XML Schema describes the structure of an XML document. The XML Schema language is also referred to as XML Schema Definition (XSD).

The purpose of an XML Schema is to define the legal building blocks of an XML document:

- the elements and attributes that can appear in a document
- the number of (and order of) child elements
- data types for elements and attributes
- default and fixed values for elements and attributes

The actual XSD description file can be obtained from Hamburg Süd along with this implementation guide.

We recommend using professional XML parsing software to create and validate the XML files against the XSD definition.

Example XSD definition for an XML tag:

```
<xs:element name="Container">
    <xs:simpleType>
        <xs:restriction base="xs:string">
            <xs:length value="11"/>
        </xs:restriction>
    </xs:simpleType>
</xs:element>
```

The above XSD code is defining a tag named “Container”. The data type is defined as a String with a fixed length of 11 characters.

3.1 Schema M_TRUCKEVENT_HSDG.xsd

The schema is importing other XSD schemas. Below all schemas are listed with their namespace and location.

schema location: [**M_TRUCKEVENT_HSDG.xsd**](#)
attribute form default: **unqualified**
element form default: **qualified**
targetNamespace: http://www.hamburgsud.com/truck_event

Elements

[**HSDG_Truck_Events**](#)

schema location: [**M_TRUCKEVENT.xsd**](#)
attribute form default: **unqualified**
element form default: **qualified**
targetNamespace: http://www.hamburgsud.com/truck_event

Elements

[**Sighting**](#)

schema location: [**M_HSDGExternalMessageHeader.xsd**](#)

3.2 Element HSDG_Truck_Events

The XSD structure contains two main elements “MessageHeader” and “Sighting”.

diagram	 <p>The diagram illustrates the XML schema structure. The root element is 'HSDG_Truck_Events'. It contains an external 'MessageHeader' (labeled 'emh:MessageHeader') and at least one 'Truck event message' (labeled 'Sighting'). The 'Sighting' element is annotated with '1..∞', indicating that it can contain multiple truck event messages. A detailed description of the elements and attributes of a truck event message is provided.</p>
namespace	http://www.hamburgsud.com/truck_event
properties	content complex
children	emh:MessageHeader Sighting
annotation	<p>documentation</p> <p>Root element to contain external MessageHeader and at least one Truck event message</p>

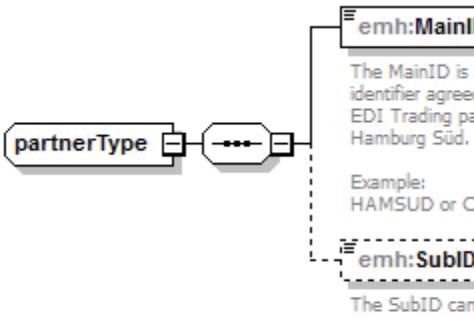

3.3 Element MessageHeader

The message header contains some general information of the received XML. It's defining the sending and receiving party, when the message was created and which version of the XSD specification was used.

namespace	http://www.hamburgsud.com/xml/external_message_header
type	emh:typeMessageHeader
properties	content complex
children	emh:MessageID emh:TimeStamp emh:Sender emh:Receiver emh:MessageType emh:MessageVersion emh:BusinessReference emh:MessageFunction emh:Environment
used by	element HSDG_Truck_Events
annotation	documentation The message header is containing important information to describe the received message.

3.3.1 complexType partnerType

diagram	 <p>The MainID is an unique identifier agreed between EDI Trading partner and Hamburg Süd. Example: HAMSUD or CPGT</p> <p>The SubID can contain the full name of the partner and additional information. Example: Container Port Group</p>
namespace	http://www.hamburgsud.com/xml/external_message_header
children	emh:MainID emh:SubID
used by	elements typeMessageHeader/Receiver typeMessageHeader/Sender

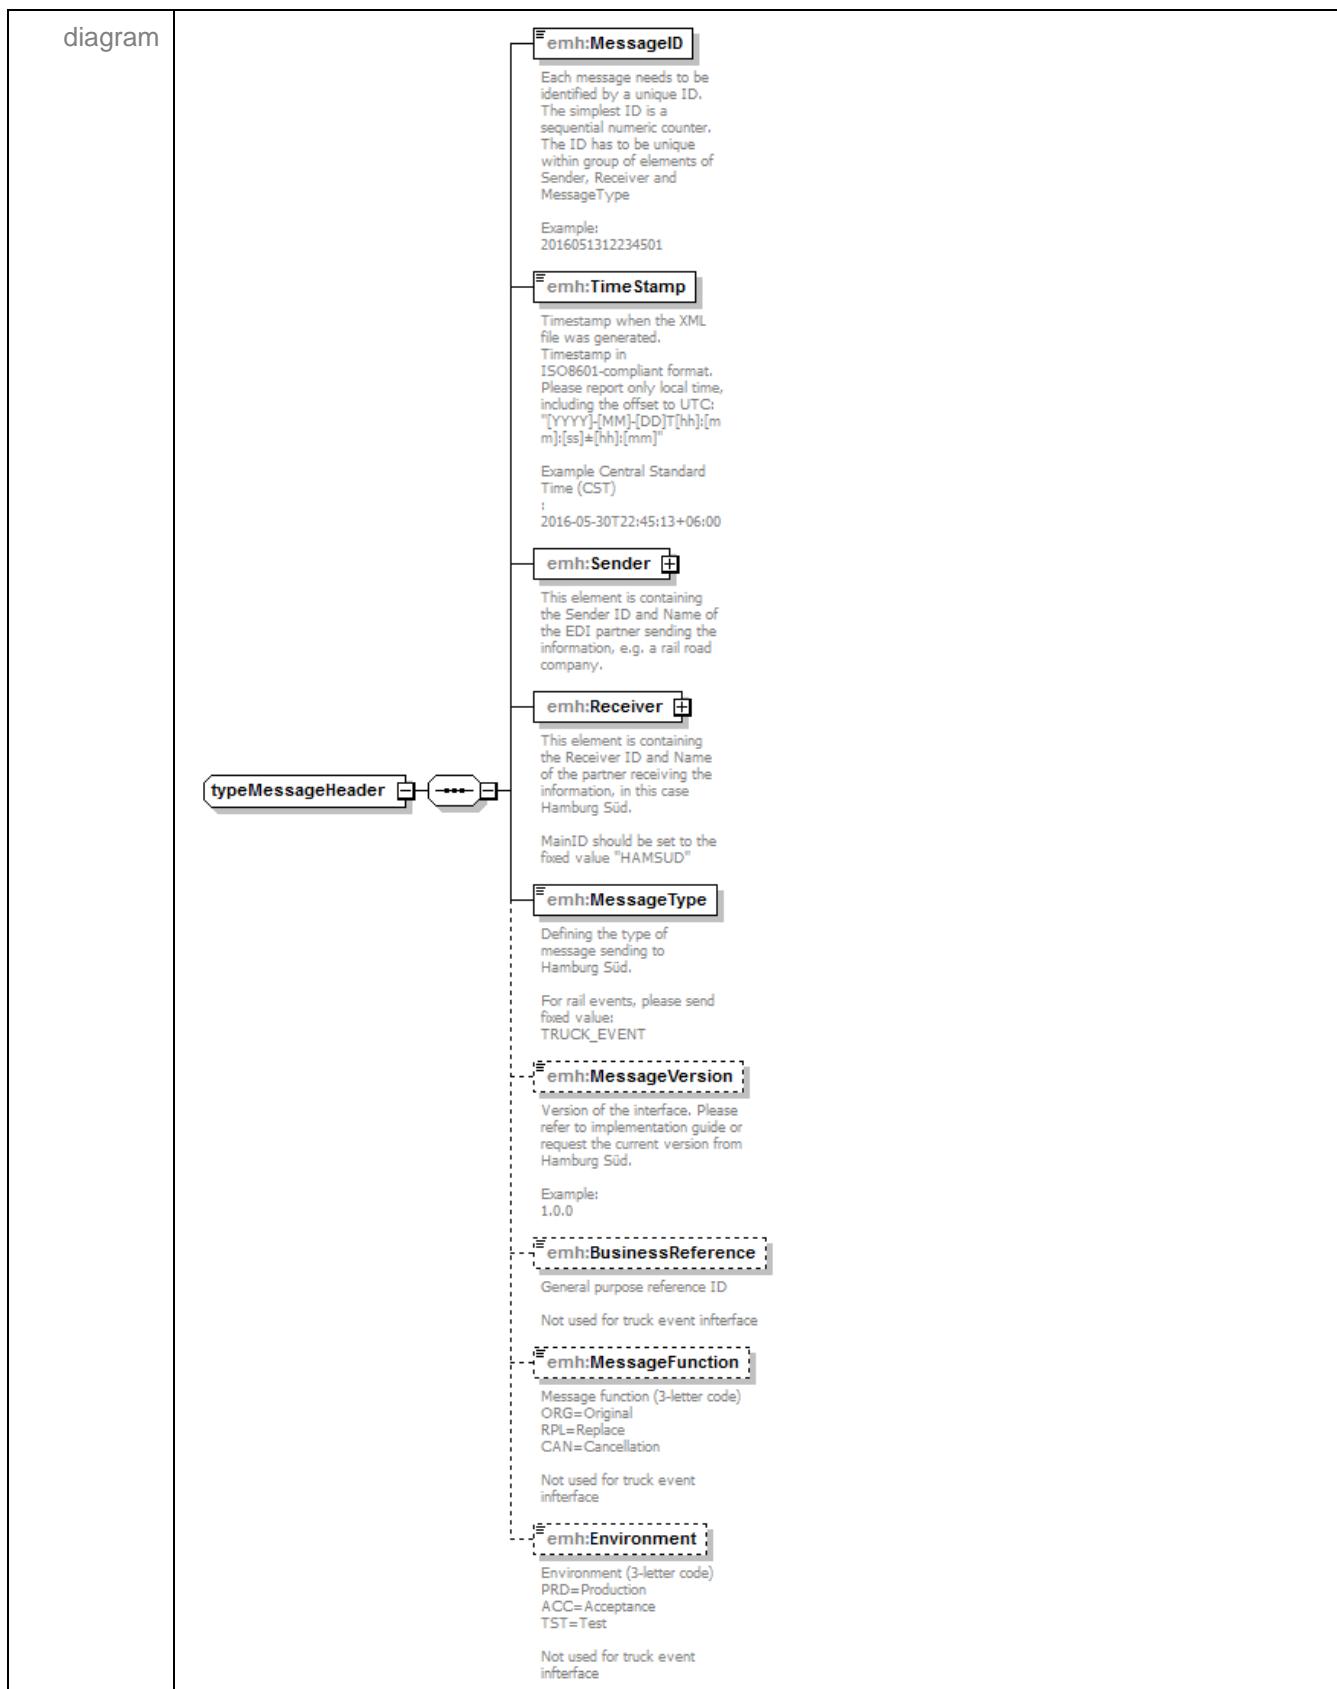

3.3.2 element partnerType/MainID

diagram	 The MainID is an unique identifier agreed between EDI Trading partner and Hamburg Süd. Example: HAMSUD or CPGT
namespace	http://www.hamburgsud.com/xml/external_message_header
type	restriction of xs:string
properties	isRef 0 content simple
facets	Kind Value annotation minLength 1 maxLength 30
annotation	documentation The MainID is an unique identifier agreed between EDI Trading partner and Hamburg Süd. Example: HAMSUD or CPGT

3.3.3 element partnerType/SubID

diagram	 The SubID can contain the full name of the partner and additional information. Example: Container Port Group
namespace	http://www.hamburgsud.com/xml/external_message_header
type	restriction of xs:string
properties	isRef 0 minOcc 0 maxOcc 1 content simple
facets	Kind Value annotation minLength 1 maxLength 30
annotation	documentation The SubID can contain the full name of the partner and additional information. Example: Container Port Group

3.3.4 complexType typeMessageHeader

namespace	http://www.hamburgsud.com/xml/external_message_header
children	emh:MessageID emh:TimeStamp emh:Sender emh:Receiver emh:MessageType emh:MessageVersion emh:BusinessReference emh:MessageFunction emh:Environment
used by	element MessageHeader

3.3.5 element typeMessageHeader/MessageID

diagram	 <p>Each message needs to be identified by a unique ID. The simplest ID is a sequential numeric counter. The ID has to be unique within group of elements of Sender, Receiver and MessageType</p> <p>Example: 2016051312234501</p>
namespace	http://www.hamburgsud.com/xml/external_message_header
type	restriction of xs:string
properties	isRef 0 content simple
facets	Kind Value annotation minLength 1 maxLength 50
annotation	<p>documentation</p> <p>Each message needs to be identified by a unique ID. The simplest ID is a sequential numeric counter. The ID has to be unique within group of elements of Sender, Receiver and MessageType</p> <p>Example: 2016051312234501</p>

3.3.6 element typeMessageHeader/TimeStamp

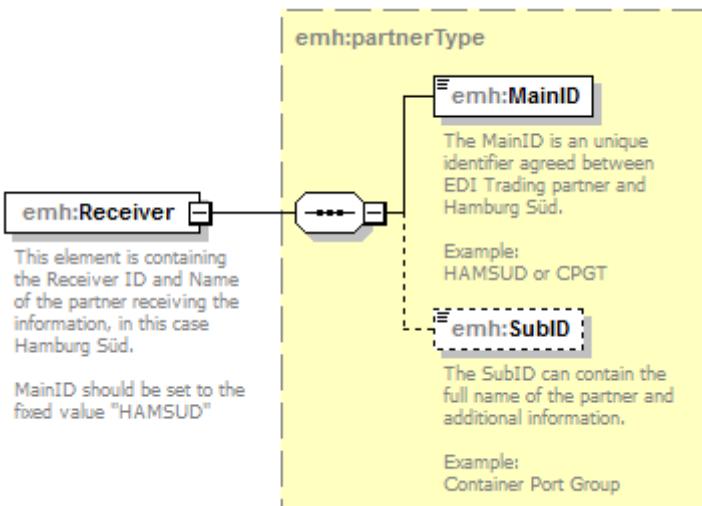

diagram	<p>emh:TimeStamp</p> <p>Timestamp when the XML file was generated. Timestamp in ISO8601-compliant format. Please report only local time, including the offset to UTC: "[YYYY]-[MM]-[DD]T[hh]:[mm]:[ss]±[hh]:[mm]"</p> <p>Example Central Standard Time (CST) : 2016-05-30T22:45:13+06:00</p>
namespace	http://www.hamburgsud.com/xml/external_message_header
type	xs:dateTime
properties	isRef 0 content simple
annotation	<p>documentation</p> <p>Timestamp when the XML file was generated. Timestamp in ISO8601-compliant format. Please report only local time, including the offset to UTC: "[YYYY]-[MM]-[DD]T[hh]:[mm]:[ss]±[hh]:[mm]"</p> <p>Example Central Standard Time (CST) : 2016-05-30T22:45:13+06:00</p>

3.3.7 element typeMessageHeader/Sender

diagram	<p>This element is containing the Sender ID and Name of the EDI partner sending the information, e.g. a rail road company.</p> <p>emh:partnerType</p> <p>emh:MainID The MainID is an unique identifier agreed between EDI Trading partner and Hamburg Süd. Example: HAMSUD or CPGT</p> <p>emh:SubID The SubID can contain the full name of the partner and additional information. Example: Container Port Group</p>
namespace	http://www.hamburgsud.com/xml/external_message_header
type	emh:partnerType
properties	isRef 0 content complex

children	<u>emh:MainID emh:SubID</u>
annotation	<p>documentation</p> <p>This element is containing the Sender ID and Name of the EDI partner sending the information, e.g. a rail road company.</p>

3.3.8 element typeMessageHeader/Receiver

diagram	 <pre> classDiagram class emh:partnerType { emh:MainID emh:SubID } emh:Receiver --> emh:partnerType </pre> <p>The diagram illustrates the UML class <code>emh:partnerType</code>. This class has two children: <code>emh:MainID</code> and <code>emh:SubID</code>. A reference line connects the <code>emh:partnerType</code> class to the <code>emh:Receiver</code> class. The <code>emh:partnerType</code> class is highlighted with a yellow background. The <code>emh:MainID</code> and <code>emh:SubID</code> classes are shown in blue boxes. The <code>emh:Receiver</code> class is also shown in a blue box.</p>
namespace	http://www.hamburgsud.com/xml/external_message_header
type	<u>emh:partnerType</u>
properties	<p>isRef 0</p> <p>content complex</p>
children	<u>emh:MainID emh:SubID</u>
annotation	<p>documentation</p> <p>This element is containing the Receiver ID and Name of the partner receiving the information, in this case Hamburg Süd.</p> <p>MainID should be set to the fixed value "HAMSUD"</p>

3.3.9 element typeMessageHeader/MessageType

diagram	 <p>Defining the type of message sending to Hamburg Süd.</p> <p>For rail events, please send fixed value: TRUCK_EVENT</p>
namespace	http://www.hamburgsud.com/xml/external_message_header

maxLength	3									
annotation	documentation Environment (3-letter code) PRD=Production ACC=Acceptance TST=Test Not used for truck event interface									

3.4 Element Sighting

The Sighting tag contains the truck event data on a container level. Each Sighting is including the latest status of the container and when the container arrived / left the reported location. This tag also contains some additional information, such as booking number, B/L number, customer number, additional locations, etc. Every XML file can contain multiple events (“<sightings>”).

	<p>TruckCompanyName</p> <p>Full name of rail company carrying the container</p> <p>Example: Container Port Group</p> <p>VendorTransportOrderNo</p> <p>Number of the vendor's Transport Order</p> <p>Example: HGTT815232</p> <p>HSDGTransportOrderNo</p> <p>Transport Order number informed by Hamburg Süd to the motor carrier.</p> <p>Example: 6PHLSA1234</p> <p>DeliveryReceipt</p> <p>Information about proof of delivery</p> <p>HSDGBillOfLadingNo</p> <p>B/L number informed by Hamburg Süd to the motor carrier. This is the B/L to which the container is assigned to</p> <p>Example: ASGEMEN1976X</p> <p>HSDGBookingNo</p> <p>Booking number informed by Hamburg Süd to the motor carrier. This is the booking number to which the container has been assigned to.</p> <p>Example: 3KXMP0669</p> <p>DestinationAddress</p> <p>Detailed address information of destination city</p> <p>Example: LPT Carpet Ltd., 1050 Market Street</p> <p>DestinationCity</p> <p>Full name of destination city</p> <p>Example: Chicago</p> <p>DestinationState</p> <p>State of the destination city</p> <p>Example (Illinois): IL</p> <p>DestinationCountry</p> <p>Country of the destination city</p> <p>Example (United States): US</p> <p>DestinationUNLOCODE</p> <p>UN Location Code of destination city</p> <p>Example (Chicago, IL): USCHI</p>

properties	isRef 0 minOcc 0 maxOcc 1 content simple
facets	Kind Value annotation length 10
annotation	documentation Booking number informed by Hamburg Süd to the motor carrier. This is the booking number to which the container has been assigned to. Example: 3KXMUP0669

3.4.20 element Sighting/DestinationAddress

diagram	 DestinationAddress Detailed address information of destination city Example: LPT Carpet Ltd., 1050 Market Street
namespace	http://www.hamburgsud.com/truck_event
type	restriction of xs:string
properties	isRef 0 minOcc 0 maxOcc 1 content simple
facets	Kind Value annotation maxLength 255
annotation	documentation Detailed address information of destination city Example: LPT Carpet Ltd., 1050 Market Street

3.4.21 element Sighting/DestinationCity

diagram	 DestinationCity Full name of destination city Example: Chicago
namespace	http://www.hamburgsud.com/truck_event
type	restriction of xs:string
properties	isRef 0 minOcc 0 maxOcc 1 content simple
facets	Kind Value annotation maxLength 255
annotation	documentation Full name of destination city Example: Chicago

3.4.22 element Sighting/DestinationState

diagram	 DestinationState State of the destination city Example (Illinois): IL
namespace	http://www.hamburgsud.com/truck_event
type	restriction of xs:string
properties	isRef 0 minOcc 0 maxOcc 1 content simple
facets	Kind Value annotation length 2
annotation	documentation State of the destination city Example (Illinois): IL

3.4.23 element Sighting/DestinationCountry

diagram	 DestinationCountry Country of the destination city Example (United States): US
namespace	http://www.hamburgsud.com/truck_event
<td>restriction of xs:string</td>	restriction of xs:string
properties	isRef 0 minOcc 0 maxOcc 1 content simple
facets	Kind Value annotation length 2
annotation	documentation Country of the destination city Example (United States): US

3.4.24 element Sighting/DestinationUNLOCODE

diagram	 DestinationUNLOCODE UN Location Code of destination city Example (Chicago, IL): USCHI
namespace	http://www.hamburgsud.com/truck_event
<td>restriction of xs:string</td>	restriction of xs:string
properties	isRef 0 minOcc 0 maxOcc 1 content simple
facets	Kind Value annotation length 5
annotation	documentation UN Location Code of destination city Example (Chicago, IL): USCHI

4 Appendix

4.1 Status Event Codes

The following truck events are supported by Hamburg Süd.

Status Code	Description
AA	Appointment time for export (delivery of empty container to the client)
AB	Appointment time for import (delivery of full container to the client)
AF	(Carrier Departed Pick-up Location with Shipment)
CD	(Carrier Departed Delivery Location)
CP	(Completed Loading at Pick-up Location)
D1	(Completed Unloading at Delivery Location)
X1	(Arrived at Delivery Location)
X3	(Arrived at Pick-up Location)

4.2 Example messages

4.2.1 Message “Appointment time @USCHI 2016-01-26 22:30”:

```
